Raider Labs Guide Sheet

Name	Date	Block

Tool	Detail: Big picture / Closer look / Deep dive
Unit	Start in: Guided / Full lab / Virtual lab / Review

Teacher: fill in the shaded boxes, or leave them for students. Skip any part you are not using.

1. Ask

Read the tool's opening question. Write it in your own words.

The question

2. Predict, then test

Commit to a prediction before you see the result. Being wrong is useful, so do not change your prediction afterward.

My prediction, and why	What happened	Why it happened

3. Test

Change one variable at a time. Let the readings settle, then record each trial here and with Record trial.

I change	I keep the same	I measure (with units)

Trial	Variable I change	Result	Result	What I noticed
1				
2				
3				
4				
5				
6				

Graph your data

Put the variable you changed on the x-axis. Label both axes and include units.

4. Explain

Answer the question

Your data The numbers that support your answer.

Why it happens The science behind your results.

5. Question the model

In Full lab, open About this model. Every simulation leaves things out.

One thing this model simplifies or leaves out, and how that could change a real result

Where this shows up in the real world Pick one example from the tool, or add your own.

A question I still have
